

PLASMA Soft[®]

IAQ Procedure Software

PlasmaSoft IAQ Procedure Software is the first web-based program of its kind enabling calculations required in ASHRAE's Standard 62.1 IAQ Procedure. The program calculates and compares contaminant levels using both ASHRAE's Ventilation Rate Method (VRM) and the Indoor Air Quality Procedure (IAQP) in reducing outside air intake.

Using PlasmaSoft, consulting engineers leverage a reliable software program that stores project and individual zone data in the cloud that can be accessed wherever and whenever the user wishes. Developers, architects and contractors will also benefit from PlasmaSoft by the ability to reduce first costs, enhance building energy efficiency and improve IAQ.

- Utilizes all ASHRAE Standard 62.1 mass-balance equations
- Contains default values for density and outdoor air rates per person and per square foot for all occupancy categories
- Resides in the cloud so users can access their projects at anytime from anywhere
- Password protected to ensure a high level of security

Plasma Air is the proud recipient of the 2016 AHR Innovation Award for its cutting edge PlasmaSoft IAQ Procedure Software, a breakthrough program that removes the guesswork from ASHRAE's IAQ Procedure.
